## Document Information

Title	Report Card Technical Guide - 2020-21
Revision	N/A
Issue Date	10/5/2021
Security Level	Public
Filename	Report Card Technical Guide_2020-21_Final.pdf
Description	Technical documentation updated for 2020-21 Report Cards
Changes	N/A

# Using This Document

---

This document provides descriptions for calculating the scores used in Wisconsin's school and district report cards. This document focuses on the three school-level report cards and their accompanying school report card:

- Public school report card,
- Private school - Choice students report card, and
- Private school - All students report card.

All calculations and descriptions also apply to the district report card. Any differences between these report cards are specifically noted.

- Public report cards are available on the Department of Public Instruction's (DPI) website: <http://dpi.wi.gov/accountability/report-cards>.
- Secure (unredacted) report cards are available to authorized users in SAFE, the Secure Access File Exchange: <http://dpi.wi.gov/wisedash/districts/safe>.

This document connects the data on the school report card to the school's **overall score** and corresponding **accountability rating**.

You can approximate the calculations used to arrive at a school's overall and priority area scores using data from the **school report card** (secure or public) and this document. Scores calculated with this document may not exactly match a school's score due to rounding, both in the calculation itself and in the display of values on the school report card.

For further information on reading and interpreting the school and district report cards please refer to our resources available here: <http://dpi.wi.gov/accountability/resources>.

## Introduction

This technical guide is meant to provide clarity about the calculations behind the 2020-21 school and district report cards produced by the Wisconsin Department of Public Instruction (DPI). Using this guide in conjunction with the [Report Card Guide](#) helps with understanding and reproducing the scores that are on the report cards. Report cards and related resources can be accessed online: [dpi.wi.gov/accountability/report-cards](https://dpi.wi.gov/accountability/report-cards).

This guide provides a series of explanations and walkthrough examples for each of the four report card priority areas (Achievement, Growth, Target Group Outcomes, and On-Track to Graduation). This guide also assists in understanding public and private school and district report cards. The report cards are designed to reflect the performance of schools and districts regardless of type—public, charter, choice, or private.

Schools in the Private School Choice Program receive a Private School – Choice Students Report Card that bases scores only upon students attending under the Choice program. These schools may also opt in to receive a Private School – All Students Report Card that scores all students in the school (those attending under the Choice program and private-paying students).

## Building the Overall Score

Wisconsin's school accountability system uses multiple measures across four priority areas to build a 0 to 100 point score for each school.

The Overall Score is a weighted average of separate scores for each of four priority areas—Achievement, Growth, Target Group Outcomes, and On-Track to Graduation.

Like the Overall Score, each of the priority areas are scored on a scale from 0 to 100. However, because Wisconsin has schools of many different sizes, grade levels, and student populations, not all of the priority areas apply in the same way to every school. Therefore, combining the priority area scores to arrive at an overall score is more complicated than taking a straight average. The following pages detail the steps taken to calculate the Overall Score.

## Background

DPI bases the process of building a school's Overall Score on two important principles:

1. **We cannot calculate every priority area score for every school.** Every component of the report cards requires at least 20 students with data to calculate a score. Some schools are too small to calculate scores for some priority areas.
2. **A school should not be advantaged or disadvantaged by the presence or lack of a priority area or component.** Simply averaging the priority areas would create a bias for schools with fewer priority areas due to the second principle as discussed above. The Report Card attempts to treat all schools fairly, regardless of availability of data.

As a result, an overall score is calculated by applying the following:<sup>1</sup>

---

<sup>1</sup> DPI has an Accountability Report Card Weighting Calculator that shows the weights applied to schools with different data availability and priority areas. See: [https://oea-dpi.shinyapps.io/report\\_card\\_weighting\\_calculator/](https://oea-dpi.shinyapps.io/report_card_weighting_calculator/).

1. **The scales of Growth and Target Group Outcomes scores are aligned with the scale of Achievement scores.** Aligning scores to a common scale avoids creating a bias between these priority areas.
2. **The Target Group Outcomes priority area score requires a Target Group Achievement, Target Group Growth, and Target Group Attendance/Graduation Score.** The priority area may also include Chronic Absenteeism. Weights within the priority area are fixed. For the method of generating the Target Group Outcomes priority area score, please refer to the calculation section.
3. **The Graduation and Attendance components within the On-Track to Graduation priority area have a fixed weight no matter how many other priority area scores or components are calculated.** Because the attendance and graduation components cause the On-Track to Graduation scores to be typically much higher than the scores of the other priority areas, freezing the weight of these components prevents an unfair bias towards schools and districts that lack other priority areas, or other components of the On-Track to Graduation priority area.
4. **At minimum, Achievement and On-Track to Graduation priority area scores are needed to produce an overall score.** On-Track Attendance/Graduation is also needed to produce an On-Track to Graduation score.

## Steps

The process for determining a school's Overall Score consists of calculating a **weighted average** of the priority area scores. This method also takes into account state statutory requirements for weighting Achievement and Growth according to the percentage of students in a school or district who are economically disadvantaged. Only the overall score incorporates variable weighting.

The steps below show how a school's Overall Score is calculated using priority area scores. Details on how these priority area scores are calculated are provided in the sections that follow.

1. **Combine Achievement, Growth, and Target Group Outcomes.** Begin calculating the overall score by taking a weighted average of the Achievement, Growth, and Target Group Outcomes scores, weighting Achievement and Growth according to the percent of economically disadvantaged students in the school. Note that these weights may not add up to 1.

Target Group Outcomes, when present, is always given a weight of 0.5.

Weights for Growth and Achievement are assigned following the guidelines in state statute, which balance Achievement and Growth according to the level of poverty in the school or district:

- a. If only Achievement is present it is given a weight of 0.5.
- b. If both Achievement and Growth are present, their weights are determined using the following rules:
  - i. For a school with 5% or fewer students who are economically disadvantaged, Achievement is given a weight of 0.9 and Growth is given a weight of 0.1.
  - ii. For a school with 65% or more students who are economically disadvantaged, Achievement is given a weight of 0.1 and Growth is given a weight of 0.9.

- iii. For a school with between 5% and 65% students who are economically disadvantaged, the relative weights of Achievement and Growth are determined using the following formulas:<sup>2</sup>

$$Achievement\ Weight = 1 - \left( \left( \frac{4}{3} * \frac{Percent\ Economically\ Disadvantaged}{100} \right) + \frac{1}{30} \right)$$

$$Growth\ Weight = 1 - Achievement\ Weight$$

- c. Calculate the weighted average of these priority areas using the following formula:

$$Average = \frac{(Achievement\ Score * Achievement\ Wt) + (Growth\ Score * Growth\ Wt) + (Target\ Groups\ Score * Target\ Groups\ Outcome\ Wt)}{Sum\ of\ Weights}$$

When a school/district has an Achievement priority area score, but no Growth or Target Group Outcomes scores, the Achievement score is used for this step.

2. **Multiply the weighted average by the correct factor.** Next, multiply the weighted average calculated in Step 1 by a factor that is determined by which components of the On-Track to Graduation priority area are available for the school:
  - a. If a score is present for either the third grade English language arts (ELA) or eighth grade mathematics On-Track components, then the weighted average is multiplied by 3.
  - b. If *no score* is present for either the ELA or mathematics On-Track components, then the weighted average is multiplied by 3.2.
3. **Combine Result with On-Track to Graduation Score.** The next step in creating the Overall Score is to sum the adjusted weighted average of the first three priority areas (calculated in step 2) and the On-Track to Graduation score, and then divide this sum by 4.
  - a. If a score is present for either the third grade English language arts (ELA) or eighth grade mathematics On-Track components, then the On-Track score is multiplied by 1 prior to combining with the other priority areas.
  - b. If *no score* is present for either the ELA or mathematics On-Track components, then the On-Track score is multiplied by .8 prior to combining with the other priority areas.

The Overall Score determines which Accountability Rating Category for a school or district. Each Accountability Rating Category corresponds to a number of stars. Note that these thresholds have changed from past years.

Accountability Rating Category	Accountability Score Range	
	Minimum	Maximum
Significantly Exceeds Expectations - ★★★★★	83	100
Exceeds Expectations - ★★★★☆	70	82.9
Meets Expectations - ★★★☆☆	58	69.9
Meets Few Expectations - ★★☆☆☆	48	57.9
Fails to Meet Expectations - ★☆☆☆☆	0	47.9

<sup>2</sup> DPI has produced an app to show how the weights of Achievement and Growth adjust based on the percentage of economically disadvantaged students: [https://oea-dpi.shinyapps.io/variable\\_weighting\\_app\\_17/](https://oea-dpi.shinyapps.io/variable_weighting_app_17/).

## Exceptions

An Overall Score cannot be calculated for schools in the following situations:

- New schools (those with only one year of data).
- Schools without tested grades (e.g., K4-2 schools).
- Schools with fewer than 20 full academic year (FAY) students in WSAS tested grades (Grades 3-11) assessed in the most recent year (2020-21) and the prior year (2018-19).

Public schools in these situations are assigned a rating based on an alternate accountability process. They may receive an AR rating of “*Alternate Rating - Satisfactory Progress*” or “*Alternate Rating - Needs Improvement*” based on a district-supervised self-evaluation process. Starting in 2020/21, schools that do not meet any of the above criteria, but who exclusively serve at-risk students are no longer part of the alternate accountability process. Instead, they are evaluated under the standard accountability process. More information about alternate accountability can be found online:

<http://dpi.wi.gov/accountability/alternate-accountability>.

In addition to the situations listed above, Choice schools may not meet the requirements for calculating an Overall Score based on the following two scenarios:

1. The school submitted insufficient Choice enrollment data, inhibiting the ability to produce an Overall Score.
2. The school submitted data for only one of the two years required for producing a score. This applies to new Choice schools and Choice schools switching opt-in statuses for the Private School-All Students Report Card.

When a Choice school falls under one of these two scenarios, it is assigned a rating of “NR-DATA.”

## Global Notes

- The report cards have four priority areas. Within each priority area, individual components are calculated. Example: Achievement is a priority area; English Language Arts (ELA) Achievement and Mathematics Achievement are two components of this priority area, each calculated separately.
- All scores are calculated and reported to one-tenth of a point.
- Calculations are rounded to the third decimal point (0.001, or 0.1%). The only exception is Percent Economically Disadvantaged, which is rounded to the nearest whole percentage point. Rounding is done at two stages in the calculation process: first, when individual student data are aggregated into a rate or average, and second, at the end of a sequence of algebraic operations.
- DPI uses a cell size, the minimum number of students needed to calculate a data component, of 20 students (N=20). In most cases, the cell size is applied to each year of data separately. In the 3<sup>rd</sup> Grade English Language Arts and 8<sup>th</sup> Grade Mathematics achievement components of the On-Track to Graduation priority area, the cell size is applied to the two most recent years of data combined. In other words, if a school meets cell size by combining the two most recent years, but would not if not combined, the data from the two most recent years are used in the calculation. This is done to provide a score for as many schools as possible.
- State level comparisons are provided on the front page of the Report Card, based on average state scores from the grade band that most closely matches the school. There are six grade bands for which state average scores are calculated: K-5, 6-8, 9-12, K-8, 6-12, and K-12. Comparison scores treat all Wisconsin students within a particular grade band as if they were one giant school. These scores are calculated using the same methodology as individual school scores. Comparisons are not used to determine a school’s score or rating category; they are provided for context only.

- Graduation, attendance, and absenteeism data are from the prior year, not the current year, due to data availability. For example, the most recent graduation, attendance, and absenteeism data used in 2020-21 report cards are from the 2019-20 school year.
- Multiple years of data are considered throughout the Report Card:
  - Achievement requires a minimum of two consecutive years of data, and may contain up to of three years of data in both ELA and mathematics
  - Growth requires two consecutive years of assessment data in both ELA and mathematics per student included in the calculation
  - The component scores of Target Group Outcomes -- Target Group Achievement, Target Group Growth, Target Group Attendance/Graduation, and Target Group Chronic Absenteeism -- contain the same pattern of data years as the analogous priority area component scores for all students in the school.
  - On-Track to Graduation requires one of the four-year or extended-year graduation rates to compute a Graduation score; both rates are used when present. Chronic Absenteeism uses up to three years of data where available.
- Whether a student attended a school for the full academic year (FAY) is determined differently at the school and district levels. For school report cards, FAY determination is based on FAY for the school, not the district; for district report cards, FAY determination is based on FAY for the district, not the school. FAY is determined at the student level through continuous enrollment from Third Friday of September (TFS) to testing/end of the spring assessment window. For past and current definitions of FAY, please visit: <http://dpi.wi.gov/wisedash/help/glossary>.
- Whether a student has school FAY status factors into whether they are included in report card calculations, for certain priority areas. The following table shows when school FAY status determines whether a student is included in a calculation:

School FAY Students Only	All Students (FAY and not FAY)
Achievement	On-Track to Graduation: Graduation Rate
Growth	On-Track to Graduation: Attendance Rate
Target Group Outcomes	Chronic Absenteeism Rate - students must have been enrolled for 90+ school days to be included in this rate.
On-Track to Graduation: 3 <sup>rd</sup> Grade English Language Arts Achievement	
On-Track to Graduation: 8 <sup>th</sup> Grade Mathematics Achievement	

## Overall Score Walkthroughs

Below are three walkthroughs using hypothetical school examples to show how the Overall Score is calculated, how those calculations may vary depending on school type (e.g., elementary, middle, high school), and how many priority areas or score components are available for the school.

Overall Score weights for priority areas and components are dependent upon school characteristics and data availability. Schools/districts can find their weights by using the Report Card Weighting Calculator at [https://oea-dpi.shinyapps.io/report\\_card\\_weighting\\_calculator/](https://oea-dpi.shinyapps.io/report_card_weighting_calculator/).

## Overall Score Walkthrough #1

Sample Elementary School has the following priority area scores, and an economically disadvantaged student percentage of 20%:

Priority Area or Component	Score/Possible
Achievement	71.7 / 100
Growth	59.0 / 100
Target Groups Outcomes	62.4 / 100
On-Track to Graduation	93.1 / 100
Chronic Absenteeism	96.5 / 100
Attendance	97.5 / 100
3 <sup>rd</sup> Grade English Language Arts	77.5 / 100

### Step 1: Combine Achievement, Growth, and Target Group Outcomes

This school has scores calculated for all three of these priority areas. First, determine the weights for each of the three priority areas:

Target Group Outcomes always has a weight of 0.5 when it is present.

Achievement Weight (Wt) =

$$1 - \left( \left( \frac{4}{3} * \frac{\text{Percent Economically Disadvantaged}}{100} \right) + \frac{1}{30} \right) = 1 - \left( \left( \frac{4}{3} * \frac{20}{100} \right) + \frac{1}{30} \right) = 1 - 0.3 = 0.7$$

Growth Weight (Wt) =

$$1 - \text{Achievement Weight} = 1 - 0.7 = 0.3$$

$$\text{Average} = \frac{(\text{Achievement Score} * \text{Achievement Wt}) + (\text{Growth Score} * \text{Growth Wt}) + (\text{Target Group Outcomes} * \text{Target Group Outcomes Wt})}{\text{Sum of Weights}}$$

$$\text{Average} = \frac{(71.7 * 0.7) + (59.0 * 0.3) + (62.4 * 0.5)}{1.5} = 66.1$$

### Step 2: Multiply the weighted average by the correct factor, determined by the number of On-Track components available

The school has attendance/graduation (required) and chronic absenteeism scores (not required) and has 3<sup>rd</sup> grade ELA and/or 8<sup>th</sup> grade Mathematics On-Track components, so this average is multiplied by 3.

$$\text{Average} * 3 = 66.1 * 3 = 198.3$$

### Step 3: Combine Result with On-Track to Graduation Scores

$$\text{Weighted Average priority areas Score} = \frac{(\text{Average} * 3) + (\text{On Track To Graduation Score})}{4}$$

$$\text{Weighted Average priority areas Score} = \frac{198.3+93.1}{4} = 72.9$$

Sample Elementary School's Overall Score is 72.9. A score of 72.9 means Sample Elementary School gets an Overall Accountability Rating of 4 stars—**Exceeds Expectations**.

## Overall Score Walkthrough #2

Example High School has the following priority area scores, and an economically disadvantaged student percentage of 52%:

Priority Area or Component	Score/Possible
Achievement	56.9 / 100
Growth	41.5 / 100
Target Group Outcomes	68.2 / 100
On-Track to Graduation	86 / 100
Chronic Absenteeism	89.4 / 100
Graduation	70.6 / 100

### Step 1: Combine Achievement, Growth, and Target Group Outcomes

This school has scores calculated for the Achievement, Growth, and Target Group Outcomes priority areas. First, determine the weights for each of the priority areas:

Target Group Outcomes always has a weight of 0.5 when it is present.

Achievement Weight (Wt) =

$$1 - \left( \left( \frac{4}{3} * \frac{\text{Percent Economically disadvantaged}}{100} \right) + \frac{1}{30} \right) = 1 - \left( \left( \frac{4}{3} * \frac{52}{100} \right) + \frac{1}{30} \right) = 1 - 0.727 = 0.273$$

Growth Weight (Wt) =

$$1 - \text{Achievement Weight} = 1 - 0.273 = 0.727$$

$$\text{Average} = \frac{(\text{Achievement Score} * \text{Achievement Wt}) + (\text{Growth Score} * \text{Growth Wt}) + (\text{Target Group Outcomes Score} * \text{Target Group Outcomes Wt})}{\text{Sum of Weights}}$$

$$\text{Average} = \frac{(56.9 * 0.273) + (41.5 * 0.727) + (68.2 * 0.5)}{1.5} = 53.2$$

### Step 2: Multiply the weighted average by the correct factor, determined by the number of On-Track components available

The school has attendance/graduation and chronic absenteeism scores, but no scores for either 3<sup>rd</sup> grade ELA or 8<sup>th</sup> grade Mathematics On-Track components, so this average is multiplied by 3.2.

$$Average * 3.2 = 53.2 * 3.2 = 170.2$$

### Step 3: Combine Result with On-Track to Graduation Scores

The school does not have 3rd grade ELA or 8<sup>th</sup> grade Mathematics On-Track to Graduation components, so its On-Track score is multiplied by 0.8.

$$On\ Track\ to\ Graduation\ Score * 0.8 = 86 * 0.8 = 68.8$$

$$Weighted\ Average\ Priority\ Areas\ Score = \frac{(Average*3.2)+(On\ Track\ to\ Graduation\ Score*0.8)}{4}$$

$$Weighted\ Average\ Priority\ Areas\ Score = \frac{170.2+68.8}{4} = 59.8$$

Example High School's Overall Score is 54.8. A score of 54.8 means Example High School gets an Overall Accountability Rating of 2 stars - **Meets Few Expectations**.

## Overall Score Walkthrough #3

Rural Elementary School has the following priority area scores, and an economically disadvantaged percent of 35%:

Priority Area or Component	Score/Possible
Achievement	63.5 / 100
On-Track to Graduation	87.6 / 100
Chronic Absenteeism	93.0 / 100
Attendance	94.5 / 100
3rd Grade English Language Arts	63.0 / 100

### Step 1: Combine Achievement, Growth, and Target Group Outcomes

This school has an Achievement score, but no Growth or Target Group Outcomes priority area scores. Therefore only the Achievement score is used: 63.5.

$$Average = \frac{(63.5 * 0.5)}{.5} = 63.5$$

### Step 2: Multiply the weighted average by the correct factor, determined by the number of On-Track components available

The school also has either an attendance or graduation score and scores for another On-Track component, so the weighted average is multiplied by 3.

$$Average * 3 = 63.5 * 3 = 190.5$$

### Step 3: Combine Result with On-Track to Graduation Scores

The school also has either an attendance or graduation component and scores for another On-Track component, so the score is multiplied by 1.

$$\text{On Track Score} * 1 = 87.6 * 1 = 87.6$$

$$\text{Weighted Average Priority Areas Score} = \frac{(\text{Average} * 3) + (\text{Attendance Score} * 1)}{4}$$

$$\text{Weighted Average Priority Areas Score} = \frac{190.5 + 87.6}{4} = 69.5$$

Rural Middle School's Overall Score is 69.5. A score of 69.5 means Rural Elementary School gets an Overall Accountability Rating of 3 stars - **Meets Expectations**.

## Calculating Priority Area Scores

### Achievement Priority Area

The Achievement priority area is designed to show **how well the students in a school have learned the knowledge and skills they are supposed to attain**. DPI uses state assessment data over the past three years to build a score, with more recent years bearing more weight on the score. Achievement is a points-based measure that gives credit for outcomes at multiple performance levels, with higher levels of performance earning more points.

### Background

The simplest way to measure Achievement with state assessment results is by the percentage of students scoring at or above the proficient level. Wisconsin state proficiency level definitions were developed through a detailed process involving educators and testing professionals, and designed to approximate the proficiency benchmarks of the National Assessment of Educational Progress (NAEP) test. Proficiency level definitions were created for each Wisconsin assessment in the state accountability system, including the Forward Exam, DLM, ACT Aspire, and the ACT with Writing, and the prior assessments – the Badger Exam, WKCE and WAA-SwD.

To ensure schools are treated fairly, and to help further differentiate school performance, the Achievement measure allows students to earn points for their school based on whether they are partially proficient (Basic), proficient, or perform beyond the proficient threshold (Advanced). Schools earn 0 points for students who are at the Below Basic level.

- Advanced level: **1.5 points**
- Proficient level: **1 point**
- Basic level: **0.5 points**
- Below Basic level: **0 points**

The calculation also incorporates three years of data to account for variation in year-to-year results, weighting the most recent years more heavily.

### Reading the Report Card

To arrive at an Achievement score, separate component scores for ELA and mathematics are calculated first and then averaged. The Performance Levels by Year graphs for ELA and mathematics in the

Achievement section show the count of students scoring at each performance level over the last three years. Non-tested students and students with invalidated tests are not included in the Achievement calculations. Consider the following example data on ELA achievement for a sample school, which will be used throughout this section walkthrough below:

This chart shows that 350 students with full academic year status were tested at this school two testing years prior (note that assessments were waived in 2019-20), with 37 scoring Advanced, 112 scoring Proficient, 116 scoring Basic, and 85 scoring Below Basic. Counts for the prior (2018-19) and most recent year (2020-21) are similarly displayed. This graph also shows the percent of students scoring in each performance category two years prior, with 10.6% scoring Advanced, 32.0% scoring Proficient, 33.1% scoring Basic, and 24.3% scoring Below Basic. Percentages for the prior and most recent years are similarly displayed.

## Achievement Walkthrough

This walkthrough guides the user through the calculation of an Achievement score for a single content component (ELA). To determine an overall Achievement score, the process is repeated for the other content component (mathematics), and the two component scores are averaged.

Throughout this walkthrough, we use three terms to describe the year of data used in each step:

- “Prior Year 2” refers to the school year two testing years before the year of the report card and is the left-most school year shown on the report card. For the 2020-21 Report Card, it refers to 2017-18 (note that assessments were waived in 2019-20).
- “Prior Year 1” refers to the school year one testing year before the year of the report card and is the center school year shown on the report card. For the 2020-21 Report Card, it refers to 2018-19.
- “Current Year” refers to the most recent school year of data used in the report cards and is the right-most school year shown on the report card. For the 2020-21 Report Card, it refers to 2020-21.

### Step 1: Assign and Average Points

The first step is to assign points for performance levels attained on the content component and calculate the average points per student for each year. Students scoring Advanced are assigned 1.5 points each; students scoring Proficient, 1 point; and students scoring Basic, 0.5 points. Students scoring Below Basic are assigned zero points. These point values are multiplied by the number of students to determine the points awarded in each category. The points for each year are then added together and divided by the total number of students tested to determine an average. Each year’s average is capped at a maximum of 1.

**ENGLISH LANGUAGE ARTS**

**Calculation**

Calculate proficiency points earned in Prior Year 2. Similar calculations are performed for Prior Year 1 and Current Year.

$$Points = Points Multiplier * Count$$

$$Prior Year 2 Advanced Points = 1.5 * 37 = 55.5$$

$$Prior Year 2 Proficient Points = 1 * 112 = 112$$

$$Prior Year 2 Basic Points = 0.5 * 116 = 58$$

$$Prior Year 2 Below Basic Points = 0 * 85 = 0$$

$$Prior Year 2 Points = 55.5 + 112 + 58 + 0 = 225.5$$

Calculate the average points per student for each year.

$$Prior Year 2 Average = Prior Year 2 Points / Prior Year 2 Count$$

$$Prior Year 1 Average = Prior Year 1 Points / Prior Year 1 Count$$

$$Current Year Average = Current Year Points / Current Year Count$$

$$Prior Year 2 Average = \frac{225.5}{350} = 0.644$$

$$Prior Year 1 Average = \frac{225}{346} = 0.650$$

$$\text{Current Year Average} = \frac{233.5}{352} = 0.663$$

## Step 2: Calculate Annual Weights

Next, we calculate a weight for each year's average, which (1) weights more recent years more heavily, and (2) takes into account year-to-year fluctuations in numbers of students tested. These fluctuations are captured by comparing the number of students tested in a given year to the average number tested across three years of data. To do this, we calculate a weight that is the product of a "students tested weight"—that is, the number of students tested that year divided by the average tested across all three years—and a "year weight" that is higher for more recent years.

The values that go into each year's weight depend upon how many years of data are available that meet our cell size (minimum number of students with data) of 20:

- **Three years available:** "Year weights" are 1.5 for the current year, 1.25 for the prior year, and 1 for the year before that; the number of students tested is averaged across all three years.
- **Two years available:** "Year weights" are 1.5 for the current year and 1 for the prior year; the number of students tested is averaged across only the current and prior years.
- **One year available:** No score. A minimum of two years available data are required to calculate an Achievement score.

### Formulas

$$\text{Average Number Tested} = \frac{\text{Prior Year 2 Number Tested} + \text{Prior Year 1 Number Tested} + \text{Current Year Number Tested}}{\text{Number of Years Available}}$$

$$\text{Prior Year 2 Weight} = 1 * \frac{\text{Prior Year 2 Number Tested}}{\text{Average Number Tested}}$$

$$\text{Prior Year 1 Weight} = 1.25 * \frac{\text{Prior Year 1 Number Tested}}{\text{Average Number Tested}}$$

$$\text{Current Year Weight} = 1.5 * \frac{\text{Current Year Number Tested}}{\text{Average Number Tested}}$$

### Calculation

$$\text{Prior Year 2 Weight} = 1 * \frac{350}{\frac{(350+346+352)}{3}} = 1.002$$

$$\text{Prior Year 1 Weight} = 1.25 * \frac{346}{\frac{(350+346+352)}{3}} = 1.239$$

$$\text{Current Year Weight} = 1.5 * \frac{352}{\frac{(350+346+352)}{3}} = 1.512$$

## Step 3: Combine Points and Weights

In step three, we multiply the average points determined in Step 1 by the weights calculated in Step 2.

### Formulas

$$\text{Prior Year 2 Score} = \text{Prior Year 2 Average} * \text{Prior Year 2 Weight}$$

$$\text{Prior Year 1 Score} = \text{Prior Year 1 Average} * \text{Prior Year 1 Weight}$$

$$\text{Current Year Score} = \text{Current Year Average} * \text{Current Year Weight}$$

### Calculation

$$\text{Prior Year 2 Score} = 0.644 * 1.002 = 0.645$$

$$\text{Prior Year 1 Score} = 0.650 * 1.239 = 0.805$$

$$\text{Current Year Score} = 0.663 * 1.512 = 1.002$$

### Step 4: Calculate Content Component Score

The achievement score for this content area is calculated by adding the scores from Step 3, dividing the result by the sum of the weights determined in Step 2, and then multiplying the final value by 100. This creates a content area score out of 100 points, which, when averaged with the other content component score, will result in a total priority area score.

### Formula

$$\text{Content Area Achievement Score} = \frac{\text{Prior Year 2 Score} + \text{Prior Year 1 Score} + \text{Current Year Score}}{\text{Prior Year 2 Weight} + \text{Prior Year 1 Weight} + \text{Current Year Weight}} * 100$$

### Calculation

$$\text{Content Area Achievement Score} = \frac{0.645 + 0.805 + 1.002}{1.002 + 1.239 + 1.512} * 100 = 65.3$$

This school's score for the ELA component of the Achievement Area Score is 65.3.

## Calculating Priority Area Scores Growth Priority Area

The Growth priority area evaluates schools on their **students' growth over time compared to the growth of similar students in other Wisconsin schools**. This measure is designed to provide information on how well schools are contributing to the continued progress of all of their students, regardless of prior achievement level, as opposed to focusing attention on a smaller subset who may be just below proficiency, very low performing, or very high-performing.

Note that the Growth priority area is calculated separately for schools and districts; district Growth scores are *not* an average of school Growth scores (see below). Additionally, on the Private School – Choice Students Report Card, the Growth priority area *only applies* to students attending under the Choice program, not all students in the school.

## Background

At the foundation of the Growth score is a statistical technique known as value-added, which is used in many states and districts as a measure of school performance. There are different types of value-added measures, each with different technical properties. Value-added measures belong to a class of statistical models that quantify how much growth students make over time after applying statistical controls for factors that are generally beyond a school's control but may influence how much growth students make. These include factors such as students' prior achievement and certain characteristics about the students themselves, such as whether they come from families with lower income levels or have a disability and/or are English learners.

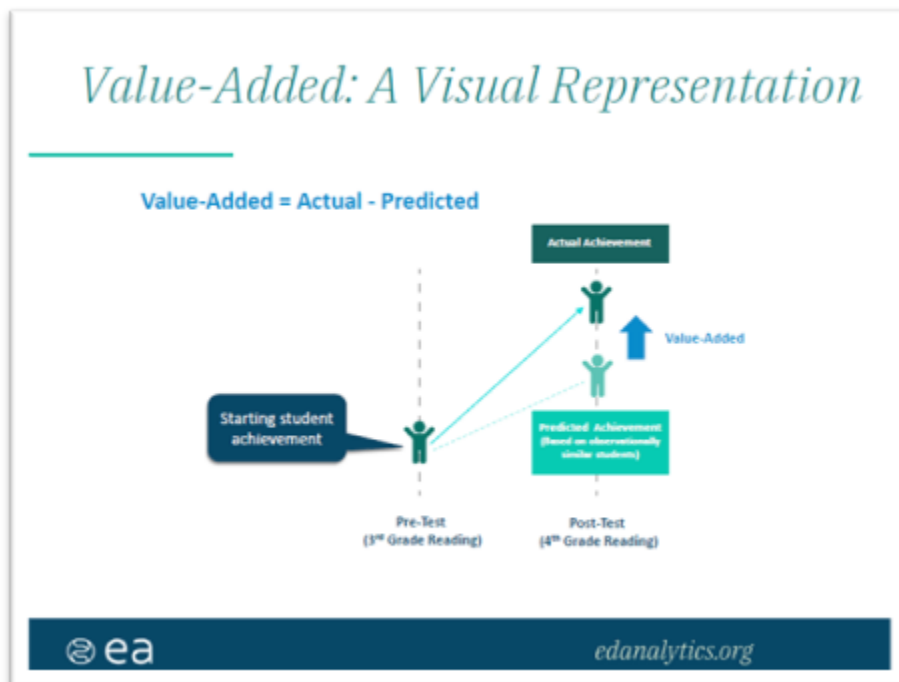

The purpose of statistically controlling for prior achievement and other student attributes is *not* to establish lowered expectations for some students' performance – since high expectations are already reinforced and rewarded through the Achievement priority area – but rather to recognize the fact that schools often differ substantially with respect to the kinds of students they serve. Some schools' enrollments are composed largely of students from more affluent families and communities who often enter school with higher levels of achievement and school readiness, while others have higher concentrations of historically marginalized populations, and therefore higher percentages of students who begin schooling with lower levels of readiness. Research accumulated across many years affirms that these kinds of factors often influence the rate at which students grow. It therefore makes sense to include in the report cards not just measures of how well students are performing at a point-in-time (Achievement), but also the rate at which all students, regardless of prior achievement level and background, are progressing over time (Growth).

While the calculations behind value-added are complex, the concept is fairly straightforward. Value-added, simply put, is the difference between the *actual* and *predicted* growth over time of students who are “observationally similar.” Similar students are determined by prior achievement and a selected set of characteristics about the students themselves that are generally beyond a school's control yet may influence students' growth over time. In addition to prior achievement, the value-added model used in the report cards (developed at the University of Wisconsin-Madison)<sup>3</sup> includes statistical controls for students' family income status (as measured by free/reduced lunch eligibility), disability status, English language proficiency level, gender, and race/ethnicity. The objective is to facilitate “apples to apples” comparisons between schools that often serve very different student populations, and to include growth across the entire spectrum of student performance, rather than just a subset that moves across proficiency levels.

---

<sup>3</sup> Additional information on the Wisconsin value-added model is available at <http://dpi.wi.gov/accountability/report-cards>, <http://dpi.wi.gov/accountability/growth>, and at <http://varc.wceruw.org/what-we-do/professional-development.aspx>.

In addition to applying statistical controls for students' prior achievement and selected attributes such as family income, the value-added model also includes a statistical correction for measurement error, a common issue in standardized assessments. Measurement error refers to the idea that students' scores on a single administration of a standardized test are not a perfect measure of their true knowledge and ability, and may differ if the same student were to take the same test again. Such variation in scores is especially common when assessment results are very low or very high, but can be statistically adjusted for in the pre-test score to help ensure that schools with large numbers of low or high-performing students are not penalized in the Growth measure.

## Reading the Report Card

To arrive at a Growth score, separate value-added component scores for ELA and mathematics are calculated first by Education Analytics, and then reported to DPI. Note that three years of value-added results are used, when available, in calculating the weighted average value-added scores. As in other parts of the report card, the current year is weighted more heavily than prior years' data:

- **Three years available:** "Year weights" are 1.5 for growth in the current year, 1 for the prior year, and 0.5 for the year before that; with results averaged across three years.
- **Two years available:** "Year weights" are 1.5 growth in for the current year, 1 for the prior year; with results averaged across both years.
- **One year available:** "Year weight" is 1 for growth in the current year.

The value-added scores generally range from 1 to 6, in which a score of 3 is average. While rare, a value-added score can extend below 1 or above 6 when growth is much higher or lower than expected.

DPI converts the value-added scores to Growth component scores for each subject on a 0- to 100-point scale. The separate component scores are then averaged together. Graphs for ELA and mathematics in

the Growth section shows the count of students included in Growth calculations and their average value-added score.

## Growth Walkthrough

This walkthrough guides the user through the calculation of a Growth score from Sample Elementary.

Consider the following example data on growth for a sample school.

This graph shows that 372 students were included in value-added calculation for ELA and 383 for mathematics, with a multi-year weighted average value-added scores of 2.0 for ELA and 3.1 for mathematics.

### Step 1: Determine the Growth Component Scores

First, we use a formula to determine the Growth component scores and put them on a similar scale to Achievement.

#### Formula

$$\text{Growth Component Score} = [(\text{Value} - \text{Added Score} * 0.19) + 0.09] * \text{Possible Points}$$

Note: 0.19 and 0.09 are numbers that align Growth to a scale based on Achievement scores.

#### Calculation

$$\text{ELA Growth Score} = [(2.0 * 0.19) + 0.09] * 100 = 47.0$$

$$\text{Mathematics Growth Score} = [(3.1 * 0.19) + 0.09] * 100 = 67.9$$

Sample Elementary has Growth component scores in English language arts of 47.0 and in mathematics of 67.9.

### Step 2: Determine the Growth Priority Area Score

To calculate the Growth priority area, average the two Growth component scores together.

#### Formula

$$\text{Growth Score} = (\text{ELA Growth score} + \text{Mathematics Growth Score})/2$$

#### Calculation

$$\text{Growth Score} = (47.0 + 67.9)/2 = 57.5$$

# Calculating Priority Area Scores

## Target Group Outcomes Priority Area

Target Group Outcomes is an **updated priority area**. It examines multiple measures for students in the bottom quartile (25%) of performance based on the prior year's test results, along with any students who scored less than proficient on that year's DLM alternate assessment. This priority area is designed to inform improvement efforts, resulting in positive change for learners who most need it while also improving outcomes for all students. It replaces the Closing Gaps priority area.

### Background

The Target Group Outcomes priority area (like Closing Gaps before it) is aimed at increasing achievement for historically underserved populations of students. But rather than scoring the outcomes of demographics-based groups, it forms a single group within a school based on test scores in the prior year. This is done to:

- Focus attention on students most in need of support:

Improving achievement for all requires that support be targeted to the students who face the greatest obstacles. When the performance of the lowest-performers in a school increases, the overall performance of (and score for) the school increases. While the target group is not formed by explicit reference to demographic groups, it still aims to raise achievement of historically marginalized students (students of color, students with disabilities, low-income students, and English learners), because low performers from these groups are included in the target group.

- More consistently score a priority area focused on gap closure, across schools of varying composition, and across report card years:

Previously, student groups at a school that did not have at least 20 students (e.g., 17 Black students, 19 Hispanic/Latino students) were not included in the Closing Gaps measure and student groups that hovered around 20 from year-to-year could jump in and out of cell size (and scores), causing large and distracting score fluctuations. The performance-based construction of the target group approach allows for the inclusion of students who are in most need of support, regardless of the size of their demographic group, while providing a more stable group size year-to-year.

- Support continuous improvement:

Identifying a lowest-performing group reinforces the idea that every school has work to do to close gaps. By focusing on a target group that is roughly 25% of students, schools are also provided with a manageable number of students on whom to focus.

For more information on how students are assigned to the target group, please see the Target Group Outcomes Guide available at <http://dpi.wi.gov/accountability/resources>.

### Target Group Outcomes Scoring

Target groups are scored using the familiar measures of achievement, value-added growth, chronic absenteeism, and graduation or attendance rates. These scores are calculated using the same

methodologies as the analogous priority area and component scores for all students (see table below). The only difference is that within the Target Group Outcomes priority area these calculations only apply to students in the target group. Note that students in the target group continue to be included in calculations for the Achievement, Growth, and On-Track to Graduation priority areas, in addition to being scored separately in the Target Group Outcomes priority area.

Target Group Outcomes Scoring Component	Calculation
Achievement	Multi-year weighted average of English Language Arts (ELA) and mathematics points-based proficiency rates
Growth	Value-added growth measure
Chronic Absenteeism	Multi-year weighted average of chronic absenteeism rate subtracted from one. Students with attendance rate below 90% are considered chronically absent.
Graduation or Attendance	Graduation is calculated using the average of four-year and seven-year cohort graduation rates. Attendance is calculated by dividing the number of actual days attended by the number of possible days attended.

At a minimum, for Target Group Outcomes to be scored, a school must meet cell-size requirements for each of Target Group Achievement, Target Group Growth, and Target Group Attendance or Graduation. The Target Group Outcomes priority area score is a weighted average of the included components. Weighting of these components for a typical school is displayed in the table below.

Target Group Outcomes Scoring Component	Weight within Target Group Outcomes priority area score
Achievement	20%
Growth	50%
Chronic Absenteeism	15%
Graduation or Attendance	15%

Note that unlike in overall report card score weighting, **Achievement and Growth are not subject to variable weighting within Target Group Outcomes**. The percentage of economically disadvantaged students at a school or district does not impact how achievement and growth are weighted in Target Group Outcomes, as it does in the overall report card weighting. For a comprehensive look at Target Group Outcomes and report card weighting scenarios, please refer to our [online report card weighting calculator](#).

## Target Group Outcomes Walkthrough

This walkthrough guides the user through calculation of a Target Group Outcomes (TGO) score for the example Mid-Sized Middle school report card. This example report card can be downloaded from

<http://dpi.wi.gov/accountability/resources>.

### 1. Target Group Outcomes component scores

These are displayed prominently on the front page of the report card.

### 2. Multiply each component score by its weight

#### Formulas

$$\text{Weighted TGO Achievement} = (\text{TGO achievement component} * \text{TGO achievement weight})$$

$$\text{Weighted TGO Growth} = (\text{TGO growth component} * \text{TGO growth weight})$$

$$\text{Weighted TGO Chronic Absenteeism} = (\text{TGO absenteeism component} * \text{TGO absenteeism weight})$$

$$\text{Weighted TGO Attendance} = (\text{TGO attendance component} * \text{TGO attendance weight})$$

#### Note that:

- Both TGO achievement and TGO growth are based on simple averages of their respective ELA and mathematics subcomponents; and
- In cases where the TGO absenteeism component is absent, TGO attendance or TGO graduation is weighted 30% instead of 15% within the TGO priority area score.

#### Calculations

Weighted TGO Achievement	=	(20.0 * 0.2)	=	4.0
Weighted TGO Growth	=	(90.7 * 0.5)	=	45.35
Weighted TGO Chronic Absenteeism	=	(77.2 * 0.15)	=	11.58
Weighted TGO Attendance	=	(92.9 * 0.15)	=	13.94

### 3. Sum the weighted component scores and apply the scale adjustment

Recall that the scale adjustment is applied so that Target Group Outcomes scores are on the same scale as the Achievement priority area score for the school.

#### Formula

TGO priority area score = (Sum of weighted components \* 1.77) - 51.01

**Calculation**

$$\begin{aligned} \text{TGO priority area score} &= ((4.0 + 45.35 + 11.58 + 13.93) * 1.77) - 51.01 \\ &= \mathbf{81.5} \end{aligned}$$

# Calculating Priority Area Scores On-Track to Graduation

The On-Track to Graduation priority area is designed to evaluate schools and districts on how successfully students are progressing toward completing their K-12 education. The priority area score includes up to four components - chronic absenteeism, attendance /graduation, and achievement at key transition points: 3<sup>rd</sup> grade English language arts and 8<sup>th</sup> grade mathematics.

## Background

The process of getting a student to graduation begins well before 12<sup>th</sup> grade, and there are key indicators throughout elementary, middle, and high school that have a direct impact on a student's likelihood of future success. This priority area is designed to hold schools accountable for a number of these key indicators.

Chronic absenteeism and graduation/attendance components make up the bulk of this priority area's score. Districts and schools that graduate students are held accountable for graduation rates, and all other schools are held accountable for attendance rates.

- **Chronic absenteeism** is an important indicator of student engagement.
- **Attendance** drives all aspects of student success throughout their school career.
- **Graduation rate** measures the outcome of our schools' overarching mission and is calculated as a cohort rate—the percentage of students starting high school together who graduate within a certain number of years.

Chronic absenteeism data, attendance data, and graduation data have some similarities. All are lagged indicators, in that data for the 2020-21 school year are not yet available. As such, we report on the 2019-20 data. Additionally, chronic absenteeism, attendance, and graduation have similar, narrow distributions of high scores. That is, the state average is around 90% to 95% for both attendance and graduation, and around 90 - 95 for chronic absenteeism scores (1 - chronic absenteeism).

Note that because the graduation rates require four and seven years of data respectively, graduation rates cannot yet be calculated for every Choice school. Therefore, not all Private School – Choice Students and Private School – All Students Report Cards will have Graduation Rate component scores within the On-Track priority area and will have scores for the Attendance Rate component instead where possible.

Two additional On-Track measures may contribute to a school's priority area score.

- **English language arts achievement in 3<sup>rd</sup> grade** and **mathematics achievement in 8<sup>th</sup> grade** are measures that strongly predict future success as students move into middle school and high school.

Due to the diversity of school and district types in Wisconsin, not all of these On-Track measures apply to every school or district. Combining the measures into a priority area score in a way that treats all schools fairly, regardless of grade span, is necessary but is also complex.

## Attendance

Attendance rate is the number of days that students actually attended (days in seat) divided by the number of days they could possibly have attended (days enrolled). Only students in kindergarten through 12th grade are included in attendance calculations. Data are presented for all students at the school and are for one year only.

$$\text{School/District Wide Attendance} = \frac{\text{Total Number of Attended Days}}{\text{Total Number of Possible Days of Attendance}}$$

## Chronic Absenteeism

Students are considered to be chronically absent if they miss 10% of school days out of the total number of school days during which they were enrolled. Chronic absenteeism is derived from attendance data and only students who are enrolled for at least 90 non-consecutive days are included in the measure. A school's chronic absenteeism score is calculated by using up to three years of weighted absenteeism rates and is then converted into a score.

### Calculating the Current Year Absenteeism Rate

1. Count the number of students who enrolled in your school for at least 90 days at any time during the prior school year. Due to data collection timelines, DPI must use the prior year's enrollment and attendance data to calculate the absenteeism rate.
2. For each individual student in Step 1, calculate that student's attendance rate. This is done by dividing the total number of days the student attended school by the total number of possible days the student could have attended school. **Note that DPI does not have data on excused versus unexcused absences – it is the district's responsibility to ensure that attendance days are being recorded and reported in accordance with DPI guidelines.**

$$\text{Individual Student Attendance Rate} = \frac{\text{Total Number of Days of Attendance}}{\text{Total Number of Possible Days of Attendance}}$$

3. Count the number of students whose attendance rate, rounded to the nearest whole percentage, is below 90%. These students are flagged as being chronically absent.
4. Divide the count of students flagged as chronically absent (Step 3) by the count of students who were enrolled for at least 90 days (Step 1). This is the school's current year absenteeism rate.

$$\text{Current Year Absenteeism Rate} = \frac{\text{Number of Students Chronically Absent}}{\text{Number of Students Enrolled 90 Days}}$$

The first table shown in the On-Track to Graduation - Additional Information page contains single-year chronic absenteeism rates for student groups present in the school. Students appear in the numerator of the chronic absenteeism rate calculation if they were absent for more than 10% of possible attendance days. For each year shown, the 'Students' column contains the total number of students for each group. The 'Rate' column reports the percentage of students in that group that were chronically absent in the given year. We will use the example table below as we walk through the remaining steps of the chronic absenteeism calculation:

## Student Group Chronic Absenteeism Rates, Single-Year

	2017-18		2018-19		2019-20	
	Students	Rate	Students	Rate	Students	Rate
All Students: 9-12 State	265,727	18.9%	265,360	18.9%	264,767	17.9%
All Students	524	18.9%	512	19.9%	514	21.6%
American Indian or Alaskan Native	< 20	*	< 20	*	< 20	*
Asian	< 20	*	< 20	*	< 20	*
Black or African American	42	52.4%	43	53.5%	36	63.9%
Hispanic or Latino	51	19.6%	55	27.3%	70	27.1%
Native Hawaiian or Pacific Islander	< 20	*	< 20	*	< 20	*
White	390	14.4%	373	13.1%	368	14.9%
Two or More Races	20	25.0%	< 20	*	< 20	*
Economically Disadvantaged	204	33.8%	187	33.2%	198	35.9%
English Learners	25	12.0%	32	28.1%	29	31.0%
Students with Disabilities	64	31.2%	68	36.8%	63	44.4%

### Calculating Absenteeism Rate over Multiple Years

Similar to the Achievement and Growth priority areas, the multi-year chronic absenteeism rate is calculated by averaging single-year absenteeism rates across one to three years of data, depending on how many years a school meets cell size (at least 20 students who were enrolled for at least 90 days during the school year). To do this, we calculate a weight that is the product of a “students weight”—that is, the number of students who enrolled in the school for at least 90 days of the school year divided by the average number of students enrolled for at least 90 days across all three years—and a “year weight” that is higher for more recent years:

- **Three years available:** “Year weights” are 1.5 for the current year, 1.25 for the prior year, and 1 for the year before that; the number of students enrolled for at least 90 days is averaged across all three years.
- **Two years available:** “Year weights” are 1.5 for the current year and 1 for the prior year; the number of students enrolled for at least 90 days is averaged across only the current and prior years.
- **One year available:** “Year weight” is 1 for chronic absenteeism in the current year.

### Formulas

$$\text{Average Number Enrolled 90 Days} = \frac{\text{Prior Year 2 Number Enrolled 90 Days} + \text{Prior Year 1 Number Enrolled 90 Days} + \text{Current Year Number Enrolled 90 Days}}{\text{Number of Years Available}}$$

$$\text{Prior Year 2 Weight} = 1 * \frac{\text{Prior Year 2 Number Enrolled 90 Days}}{\text{Average Number Enrolled 90 Days}}$$

$$\text{Prior Year 1 Weight} = 1.25 * \frac{\text{Prior Year 1 Number Enrolled 90 Days}}{\text{Average Number Enrolled 90 Days}}$$

$$\text{Current Year Weight} = 1.5 * \frac{\text{Current Year Number Enrolled 90 Days}}{\text{Average Number Enrolled 90 Days}}$$

### Calculation

$$\text{Prior Year 2 Weight} = 1 * \frac{524}{\frac{(524+512+514)}{3}} = 1.014$$

$$\text{Prior Year 1 Weight} = 1.25 * \frac{512}{\frac{(524+512+514)}{3}} = 1.239$$

$$\text{Current Year Weight} = 1.5 * \frac{514}{\frac{(524+512+514)}{3}} = 1.492$$

Next, we multiply each year's weighted chronic absenteeism rates and weights together:

### Formulas

$$\text{Prior Year 2 Weighted Rate} = \text{Prior Year 2 Rate} * \text{Prior Year 2 Weight}$$

$$\text{Prior Year 1 Weighted Rate} = \text{Prior Year 1 Rate} * \text{Prior Year 1 Weight}$$

$$\text{Current Year Weighted Rate} = \text{Current Year Rate} * \text{Current Year Weight}$$

### Calculation

$$\text{Prior Year 2 Weighted Rate} = 0.189 * 1.014 = 0.192$$

$$\text{Prior Year 1 Weighted Rate} = 0.199 * 1.239 = 0.247$$

$$\text{Current Year Weighted Rate} = 0.216 * 1.492 = 0.322$$

The chronic absenteeism multi-year rate is then calculated by adding the weighted rates and dividing the result by the sum of the weights:

### Formula

$$\text{Multi Year Rate} = \frac{\text{Prior Year 2 Weighted Rate} + \text{Prior Year 1 Weighted Rate} + \text{Current Year Weighted Rate}}{\text{Prior Year 2 Weight} + \text{Prior Year 1 Weight} + \text{Current Year Weight}}$$

### Calculation

$$\frac{0.192+0.247+0.322}{1.014+1.239+1.492} = .203$$

### Convert the multi-year chronic absenteeism rate into a score

A chronic absenteeism score on the report card is calculated by subtracting the multi-year absenteeism rate from 1 and multiplying by 100. This *rate* is converted to a *score* so that, like the rest of the report card, higher numbers are better.

### Formula

$$\text{Chronic Absenteeism Score} = (1 - \text{Multi Year Rate}) * 100$$

### Calculation

$$\text{Chronic Absenteeism Score} = (1 - 0.203) * 100 = 79.7$$

## Graduation

The next table shows graduation rate information when applicable:

### Student Group Graduation Rates

This table shows for each of two cohorts the percentage of students starting high school together who graduated by 2019-20. The four-year rate pertains to students who started high school four years earlier, and the seven-year rate pertains to students who started seven years earlier.

	Four-year cohort graduation rate			Seven-year cohort graduation rate		
	Students in cohort	Graduates	Rate	Students in cohort	Graduates	Rate
All Students: 9-12 State	67,022	60,310	90.0%	65,532	60,774	92.7%
All Students	131	119	90.8%	134	128	95.5%
Asian	< 20	*	*	< 20	*	*
Black or African American	< 20	*	*	< 20	*	*
Hispanic or Latino	< 20	*	*	< 20	*	*
Native Hawaiian or Pacific Islander	0	NA	NA	< 20	*	*
White	95	93	97.9%	105	104	99.0%
Two or More Races	< 20	*	*	< 20	*	*
Economically Disadvantaged	49	40	81.6%	32	29	90.6%
English Learners	< 20	*	*	< 20	*	*
Students with Disabilities	< 20	*	*	< 20	*	*

Graduation rates are given for a [cohort of students](#). The 2019-20 cohorts are students at the school or district who started high school in 2016-17 for the four-year cohort and 2013-14 for the seven-year cohort. Students are removed from the school or district cohort under some circumstances, most commonly because they transferred to another school or district. A more complete discussion of exit-types and their impact on inclusion in the cohort is discussed on the [Exit Types](#) WISE data elements page. The graduation rate is the percentage of each cohort who graduated by 2019-20. The seven-year cohort rate captures most graduates who take more than four years to complete high school.

Four-year graduation rates for Choice schools will be calculated beginning with the 2020-21 Report Card. Data for the seven-year cohort graduation rate are not yet available, and therefore this rate will be “NA” on both versions of the Private School report cards. Additionally, not all Choice schools will have enough data to begin calculating the four-year graduation rates. In such cases, “NA” will appear in place of calculated rates.

## 3<sup>rd</sup> Grade English Language Arts/8<sup>th</sup> Grade Mathematics Achievement

These measures differ from other parts of the report card in how cell size (the minimum number of students with data necessary to calculate a score) is used. In most places, we use a cell size of 20 for each year separately, but applying this to a single grade would omit a large number of small elementary schools. Instead, for these measures only, we use a cell size of 20 over the two most recent years. This

change affects only whether data is presented on the report card and used to determine a score, not the process by which the score is calculated.

## Combining Individual Components into a Priority Area Score

The On-Track to Graduation priority area scores are reported out of 100 maximum points, and are 20-25% of the Overall Score, depending on the grade configuration of the school or district.

Chronic absenteeism scores are reported out of 100 maximum points. The score is calculated by subtracting the multi-year weighted all-students rate of chronic absenteeism from 1, and multiplying by 100. The chronic absenteeism component accounts for either 40% or 50% of the priority area score.

Attendance/graduation scores are reported out of 100 maximum points and account for either 40% or 50% of the priority area score.

- Attendance scores are the single-year school-wide attendance rate, multiplied by 100.
- Graduation scores are the weighted average of the four-year and seven-year graduation rates, multiplied by 100.

English language arts achievement in 3<sup>rd</sup> grade and mathematics achievement in 8<sup>th</sup> grade scores are reported out of 100 maximum points each. Each score accounts for 10% or 20% of the priority area score, when present. If a school or district has only 3<sup>rd</sup> grade English language arts or only 8<sup>th</sup> grade mathematics scores available, then the component is worth 20% of the priority area score; if a school or district has both 3<sup>rd</sup> grade English language arts and 8<sup>th</sup> grade mathematics data, each component is worth 10%. This is specified in the following table:

3 <sup>rd</sup> Grade English Language Arts =	20%	if no 8 <sup>th</sup> grade mathematics data are available
	10%	if 8 <sup>th</sup> grade mathematics data are available
8 <sup>th</sup> Grade Mathematics =	20%	if no 3 <sup>rd</sup> grade English language arts data are available
	10%	if 3 <sup>rd</sup> grade English language arts data are available

## On-Track Walkthrough #1

This walkthrough uses data on chronic absenteeism, attendance, and 3<sup>rd</sup> grade English language arts achievement to determine a score for Sample Elementary School.

### Step 1: Calculate the Chronic Absenteeism Score

#### CHRONIC ABSENTEEISM

Score: 91.6

Score is 1 minus actual chronic absenteeism rate – the percentage of students who missed more than 10% of school days – so a higher score is better.

This school has a 3<sup>rd</sup> grade English language arts outcome, so chronic absenteeism is weighted as 40%:

$$\text{Chronic Absenteeism Score} = 91.6 * 0.4 = 36.64$$

### Step 2: Calculate the Graduation/Attendance Score

#### SCHOOL-WIDE ATTENDANCE

Score: 95.5

This score is the overall attendance rate for the school in 2019-20.

This is an elementary school and does not graduate students, so its attendance rates are used to determine the graduation/attendance score. Attendance is weighted as 40%:

$$\text{Graduation/Attendance Score} = 95.5 * 0.4 = 38.2$$

### Step 3: Calculate the 3rd Grade English Language Arts Achievement Score

#### 3RD GRADE ENGLISH LANGUAGE ARTS

Score: 59.4

Average points-based proficiency rates.

The method for calculating the 3<sup>rd</sup> grade English language arts and 8<sup>th</sup> grade mathematics achievement scores is the same as described in the Achievement walkthrough (starting on page 20).

Sample Elementary School only has a 3<sup>rd</sup> grade English language arts achievement component, so the outcome is weighted 20%:

$$\text{3rd Grade English Language Arts Achievement Score} = 59.4 * 0.2 = 11.88$$

## Step 4: Determine the Total On-Track to Graduation Score

The total score for this priority area is the sum of all its components' scores:

Chronic Absenteeism Score	36.64
+	
Graduation/Attendance Score	38.2
+	
3 <sup>rd</sup> Grade English Language Arts Achievement Score	11.88=
<hr/>	
Total On-Track to Graduation Score	<b>86.72</b>

The result is rounded to the tenths position, therefore Sample Elementary School has an **On-Track to Graduation score of 86.7**.

## On-Track Walkthrough #2

This walkthrough will use data on chronic absenteeism, graduation, 8<sup>th</sup> grade mathematics achievement, and 3<sup>rd</sup> grade English language arts achievement to determine a score for Sample K-12 School.

### Step 1: Calculate the Chronic Absenteeism Score

#### CHRONIC ABSENTEEISM

Score: 89.6

Score is 1 minus actual chronic absenteeism rate — the percentage of students who missed more than 10% of school days — so a higher score is better.

This school has 3<sup>rd</sup> grade English language arts and 8<sup>th</sup> grade mathematics outcomes, so chronic absenteeism is weighted as 40%:

$$\text{Chronic Absenteeism Score} = 89.6 * 0.4 = 35.84$$

## Step 2: Calculate the Graduation/Attendance Score

### Graduation

#### GRADUATION

Score: 95.4

Average of 2019-20's 4- and 7-year cohort rates.

Sample K-12 School graduates students, so we use graduation rates to determine this score. The graduation/attendance score is calculated as the average of the four-year cohort rate and the seven-year cohort rate, weighted by the number of students in each cohort. The average is then weighted as 40%:

$$\text{Graduation/Attendance Score} = 95.4 * 0.4 = 38.16$$

## Step 3: Calculate the 8th Grade Mathematics Achievement Score

#### 8TH GRADE MATHEMATICS

Score: 60.0

Average points-based proficiency rates.

The method for calculating the 3<sup>rd</sup> grade English language arts and 8<sup>th</sup> grade mathematics achievement scores is the same as described in the Achievement walkthrough (starting on page 20).

Because 3<sup>rd</sup> grade English language arts achievement is also present for the school, the 8th grade mathematics weighting is 10%:

$$\text{8th Grade Mathematics Achievement Score} = 60.0 * 0.1 = 6.0$$

## Step 4: Calculate the 3rd Grade English Language Arts Achievement Score

### 3RD GRADE ENGLISH LANGUAGE ARTS

Score: 59.8

Average points-based proficiency rates.

Because 8<sup>th</sup> grade mathematics achievement is also present for the school, the 3rd grade English language arts weighting is 10%:

$$3rd\ Grade\ English\ Language\ Arts\ Achievement\ Score = 59.8 * 0.1 = 5.98$$

#### Step 5: Determine the Total On-Track to Graduation Score

Chronic Absenteeism Score	35.84
Graduation/Attendance Score	38.16
8 <sup>th</sup> Grade Mathematics Achievement Score	+ 6.0
3 <sup>rd</sup> Grade ELA Achievement Score	+ 5.98 =
<hr/>	
Total On-Track to Graduation Score	<b>85.98</b>

The result is rounded to the tenths position, therefore Sample K-12 School has an **On-Track to Graduation score of 86.0**.

## On-Track Walkthrough #3

This walkthrough will use data on chronic absenteeism and graduation to determine a score for Sample High School.

### Step 1: Calculate the Chronic Absenteeism Score

#### CHRONIC ABSENTEEISM

Score: 79.7

Score is 1 minus actual chronic absenteeism rate – the percentage of students who missed more than 10% of school days – so a higher score is better.

Due to there *not* being a 3<sup>rd</sup> grade English language arts or 8<sup>th</sup> grade mathematics outcome, chronic absenteeism is weighted as 50%:

$$\text{Chronic Absenteeism Score} = 79.7 * 0.5 = 39.85$$

### Step 2: Calculate the Graduation/Attendance Score

#### Graduation

#### GRADUATION

Score: 93.2

Average of 2019-20's 4- and 7-year cohort rates.

Sample High School graduates students, so we use graduation rates to determine this score. Due to there *not* being a 3<sup>rd</sup> grade English language arts or 8<sup>th</sup> grade mathematics outcome, graduation/attendance is weighted as 50%:

$$\text{Graduation/Attendance Score} = 93.2 * 0.5 = 46.6$$

### Step 3: Determine the Total On-Track to Graduation Score

Chronic Absenteeism Score	39.85
Graduation/Attendance Score	46.6
+	
<hr/>	
Total On-Track to Graduation Score	86.45

The result is rounded to the tenths position, therefore Sample High School has an On-Track to Graduation score of 86.5.

## Test Participation Supplemental Data

Test Participation was previously a Student Engagement Indicator, for which schools and districts could receive a deduction for having a test participation rate of less than 95 percent for the all student group and/or student groups. Test participation rates no longer affect scoring on the report cards; however, these data are still reported given their importance in highlighting educational inequities. As such, the current year test participation rate is provided as supplemental information on the “Achievement-Additional Information” page. Test participation rates for ELA and mathematics are provided for all students and for the lowest-participating student group.

To calculate test participation for the current year, follow the steps below:

1. Count the total number of students enrolled in tested grades at test time in the current year. This can be done at the “All Students” level **and** for each group of students. If a student group has fewer than 20 students enrolled, a test participation rate cannot be calculated for that group, and the group is excluded from the test participation Student Engagement Indicator determination.
2. For groups with at least 20 enrolled students, count the total number of students who were assessed using either the general assessment (e.g., Forward, ACT) or the alternate assessment (e.g., DLM). This can be done at the “All Students” level **and** for each group of students. This step should be done separately for both math and ELA.
3. For students for whom this was their first year in the country, participation in the ACCESS for English Learners test may be used in place of participation for the ELA assessment.
4. To determine each group’s current year participation rate, divide the number of students tested (the count from Step 2) by the number of students enrolled (the count from Step 1). This can be done at the “All Students” level, **and** for each group of students. This step should be done separately for both mathematics and English language arts.

## Course and Program Data

For information on the new Course and Program Data pages of the report card, please see the “Course and Program Data Guide” on the [Accountability Resources page](#).

## Resources

Please visit the [Accountability Resources page](#) to find additional resources on report cards. You can
